

Aurora

Scanning Application for the Scanmaster™ 4500 CosMYK and Scanmaster 7500

Featuring ColorBlind™ Color Management
System for the Scanmaster 7500

4500 FEATURES

- Extensive CMYK control for optimal on-the-fly hardware processing
- Dynamic batch capability for simultaneous scanning and set-up
- Pre-defined menu settings for automatic adjustment of various output requirements
- Quick and easy mixed media scanning without loss of productivity
- Line art threshold of 1-bit per pixel data for black and white scanning
- Easy to use settings for conversion of four-color originals for grayscale output
- Multi-level controls for quality results at any experience level
- Automatic or manual focus/defocus of images for optimum image quality control
- Interactive focus for visual adjustment on the monitor
- Before and after color corrections preview for immediate feedback
- Precise sharpening/unsharpening on various types of images via extensive USM controls
- Multiple output file format capability—TIFF, EPS, and DCS Macintosh® or PC platform

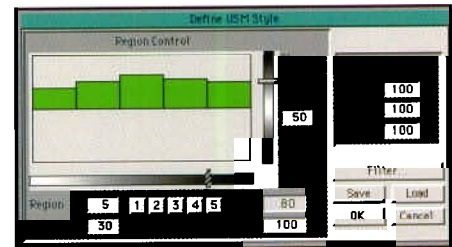

7500 FEATURES

Includes all 4500 features plus:

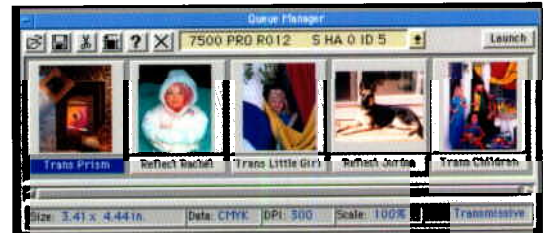

- Embedded Color Management System for Macintosh
- Customized profiling available for device-specific output
- Selective color editing for critical color corrections
- Resolutions of 50 to 16,000 dpi

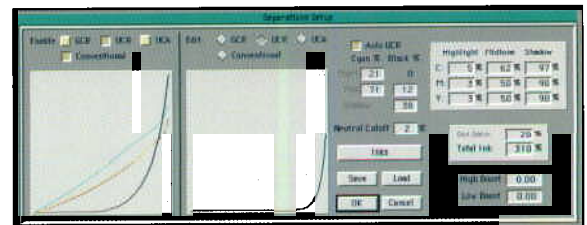

Imaging that makes a difference™

Flexible controls allow for either overall image sharpness or variable sharpening in five different tonal ranges. Users have the capability of applying precise sharpening to produce quality results—even from difficult originals.

Productivity is maximized with the Queue Manager. Background scanning of batched images frees up the workstation and allows the operator to perform other functions while simultaneously scanning.

Easy settings of UCR, GCR, and conventional black provide the ability to adjust image parameters for a wide range of presses and other output devices.
