

Imaging that makes a difference.

If you want the finest quality scans available on a desktop, Howtek drum scanners will give you exactly what you're looking for: The richest and broadest spectrum of color. Plus exceptional clarity and detail. Make certain you get the most out of every scan. With Howtek drum scanners, the image you present will always be your best.

Howtek 

Scanmaster 4500

If you're considering a high-end CCD flatbed scanner, consider the Scanmaster 4500 drum instead. Here's why:

- **Inherently better image quality** – The best CCD technology has come a long way, but it still can't match the quality you can get from a PMT scanner like the 4500. Detail, richness and color range are every bit as good as the best scans you can buy. Why settle for less?
- **Greater flexibility and throughput** – With Howtek, you can batch different types and sizes of media, setting each one up individually. It's just one of the ways you'll decrease turnaround while boosting productivity.
- **Ease of use** – If you've ever gone through post scanning gyrations to squeeze quality out of an image, you'll appreciate Howtek's push button color.

The 4500 combines unbeatable image quality and excellent performance at a price that will surprise you. Get the details today.

The Scanmaster 7500 delivers productivity and throughput. Plus dramatically lower costs per scan.

The 7500 has given commercial shops everywhere a true competitive edge – reduced prep, scanning, and overall job turnaround time, and improved quality at the same time.

You don't need to be concerned about the size or range of originals your customers throw at you. The 7500's large format drum takes care of them all.

There's also **Aurora™** software which makes the 7500 exceptionally easy to use and provides the tools to help you get the most out of every image. With multi-tasking, you have the flexibility to run one job while you're setting up the next. It all adds up to higher productivity, higher profits, and the fastest ROI in the business.

But don't take our word for it.

Call (800) 444-6983 and we'll send you everything you need to make the right decision. We'll also send you a transparency of the image on the other side of this page, so you can see for yourself how good your scans can be.
