

Kodak Professional 220 or 260 interactive imaging solution

360° professional photography made easy.

KAIDAN

LIVE PICTURE
Zoom in for a closer look™

Are your customers asking for more realistic web pages? Do they want to become a part of the story you are trying to tell them? Well, look no further, Kodak Professional has the solution for you—the *Kodak Professional* interactive imaging solution. With this solution, your customers can now take a “virtual walk-through.” What is a “virtual walk-through?” Well, instead of looking at a flat picture of a museum or house, you can now tour that museum or virtually visit a home you are thinking to purchase. Interactive imaging or panoramic photography is where the finished product places the user inside the scene. The user can tour through an environment and gain the full appreciation of that environment.

This solution includes the new Kodak Digital Science™ 220 or 260 zoom camera / pro edition. These cameras offer megapixel resolution and have a 16 MB picture card with the interactive imaging mode built in. The script on the card allows you to easily group together the multiple shots required to create the panoramic images. Using the Live Picture PhotoVista software designed for Kodak, it is easy to create complete panoramas with full rotation. PhotoVista supports the FlashPix high-resolution imaging format which enables you to

quickly zoom in and examine panoramas on the web.

The kit also includes the custom molded tripod head by Kaidan, built from the design award winning KiWi product line. The PhotoVista software by Live Picture was designed for Kodak. It supports high resolution imaging and FlashPix format.

Kodak Digital Science™ 220 or 260 zoom camera / pro edition features

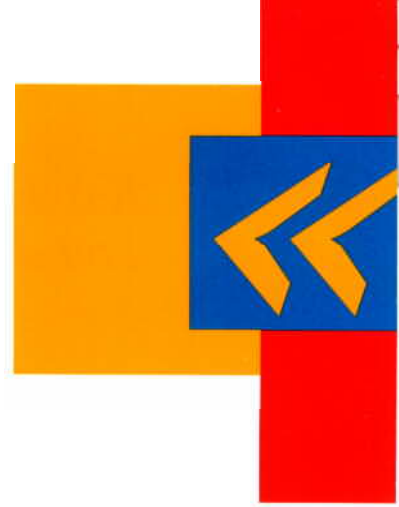

- Compact flash
- Video out
- Two 16 MB picture cards with interactive imaging scripting
- Burst capability
- Audio
- JPEG/FlashPix files

- AC adapter
- 220 zoom camera only:
 - 1M pixel resolution
 - 2X optical zoom
- 260 camera only:
 - 1.6 M pixel resolution
 - 3X optical zoom

Custom Molded Head by Kaidan

The KiWi 220 or KiWi 260 head allows you to mount the Kodak Digital Science™ 220 or 260 zoom camera / pro edition.

Kodak Professional 220 or 260 interactive imaging solution

Mounting is a snap since this head was custom designed for Kodak. The cameras only fit on one way. This head has a twin-axis bubble level that can be viewed from the side - even when placed slightly above eyelevel. The click-stop mechanism has either 16 (220) or 18 (260) positions. To use the KiWi 220 or KiWi 260 head simply rotate and "click" from stop to stop. It's as simple as that.

PhotoVista software by Live Picture

This image stitching software was developed by Live Picture for Kodak. It is for Web designers who want to enhance visual communication on their Web sites with spectacular 360° panoramic images. Web site visitors can experience, not just look at the site. PhotoVista turns a series of photographs into a seamless panorama in minutes. Panoramic files are high-quality, compact, and bandwidth-friendly—typically less than 100K—so your images burst onto the screen. Now you can navigate photoquality content in real time and experience the next best thing to being there!

PhotoVista also offers FlashPix support. FlashPix provides fast delivery of high-resolution images and lets you zoom in to the image to examine the details without the image pixelating. PhotoVista is an award-winning program and the easiest panoramic software to use.

Kodak Professional interactive imaging system includes:

- Kodak Digital Science™ 220 or 260 zoom camera / pro edition
- PhotoVista software from Live Picture
- Kaidan KiWi+ tripod head custom molded for the 220/260 zoom camera
