- Lamination feature insures durable, long-lasting prints
- Low cost

The KODAK PROFESSIONAL 4720 Photo Printer is the first small format, digital printer that combines photographic quality output from Kodak with the ruggedness needed by professionals. It offers unique and versatile print sizes, and prints at a rate of 60+ prints per hour. With a lightweight, durable, easy-to-use design, the 4720 is the go-anywhere printer that will be with you for tens of thousands of prints.

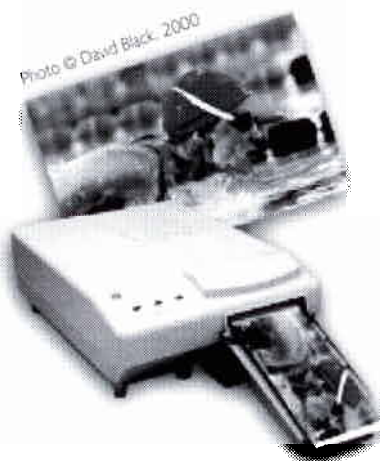

If digital photography is your business, then the 4720 is for you. It uses thermal media patented by Kodak, delivering the same high-quality photos you expect from Kodak digital printers. The media's laminate overcoat provides fingerprint-resistant, re-transfer protective prints. And the 4720's in-line trimmer allows it to print either 4 x 6 or 4 x 7-inch borderless prints without any manual trimming. Kodak photo sticker media allows you to add new sales options to your output packages.

If you are a system's integrator, Kodak makes it easy to customize your interface to the 4720. To help, Kodak provides programmer's reference utilities with the printer and backs it up with an expert developer's support group.

The 4720 printer is also ideal for many other imaging uses including government agencies, passport and identification, non-diagnostic medical imaging and scientific documentation.

With the 4720 printer, you will get great out-of-the-box color from your digital files fast. By combining Kodak color science, patented thermal media and simplified printer software, the 4720 makes digital photo printing easy.

The 4720 printer produces accurate, consistent color resulting from the use of Kodak color science technology and its patented thermal media. An easy-to-use software color calibration utility is also included to ensure accurate and consistent color response print after print even over time, usage and ribbon changes.
