

# S Solitaire<sub>8</sub>.

The imaging speed that you could only dream about is now a reality.

**M**EET THE Solitaire® Image Recorder... the combination of Management Graphics' years of proven graphics system experience and the latest electronic technology. The result is a digitally driven recorder that produces full-color slides, overhead transparencies and prints at

2K & 4K in under a minute. That's the kind of speed that makes short work of fast turn-around jobs and makes big projects seem small. It's today's answer for the professional who demands high quality output and high speed.

**Dramatic increase in productivity.** Only Solitaire can give you this type of quality and an imaging time of less than one minute per slide at 2K and 4K (8K slightly longer). That means you can produce more business presentation graphics per hour than ever before possible. Rush jobs can be turned

around faster and big jobs won't tie up as much time. Plus, an automatic self-diagnostic feature at power-up saves valuable shooting time by reducing the need for troubleshooting during production. You'll save even more time with its easy film loading and unloading operation.

**Consistent, high-quality colors and images.** Solitaire's unique patented Digital Geometry Control (DGC), a computerized pinpoint adjustment, assures faithful reproduction of colors and images at 2K, 4K and 8K line resolution. It can support over 16.7 million colors allowing virtually unlimited creative flexibility and graphic realism. And Solitaire eliminates guesswork with its unique automatic calibration and alignment.

**Designed for easy operation.** Operating the Solitaire is a snap. The front panel push-button menu system gives the operator quick fingertip access to all the recorder's commands. And once you've configured the unit the way you want it to operate, you can store the configuration for future use. When you combine that with the fact that Solitaire can detect which film transport you're using (and adjust its settings accordingly) the time you'll save is significant. Work order numbers can be

imaged between sprocket holes, too.

Its front panel Liquid Crystal Display (LCD) shows continuous system operation status. Indicator lights and audible warnings alert the operator to any problem that might arise. Solitaire has a compact, vertical, easy to fit design and no mechanical parts to adjust. It's the ultimate in film recorder convenience and simplicity.

**Total compatibility.** Solitaire is IEEE-488 or optionally SCSI com-

patible and can be configured with any Management Graphics workstation to give you a complete MGI in-house presentation graphics system. It is also compatible with other computer graphic systems using an IEEE-488 or SCSI interface.

Of course, Solitaire is backed by the commitment and support you've come to expect from Management Graphics... the name that means quality and service in the presentation graphics industry.

- Addressability (35mm) ♦ 2048x1366, 4096x2732 and 8192x5464
- Number of colors ♦ More than 16.7 million
- Recording/imaging speed ♦ 43 seconds per slide for 2K & 4K (8K 79 seconds)
- Digital Geometry Control (DGC) ♦ Automatically controls geometry, focus, vignette, intensity, linearity distortion, and various formats
- Power up ♦ Self test, ½ hour warmup
- Film transports ♦ MGI 35mm Cassette Load Film Transport  
Maron 250S Film Transport  
Maron 300 Film Transport  
Forox Multiformat Film Transport  
Oxberry 35mm Film Transport  
Oxberry/Mitchell 35mm Cine Film Transport  
Polaroid Auto Film Carrier  
MGI 4 in x 5 in Standard and Premium Sheet Film Carriers  
MGI 8 in x 10 in OHT and Premium Sheet Film Carriers  
Maron 7 in x 9 in Roll Film Transport
- Recommended film type ♦ Ektachrome ASA100 and others (consult MGI)
- Interface ♦ IEEE-488 standard, SCSI optional
- Dimensions (HxWxD) ♦ 35 in x 15 in x 22 in
- Weight ♦ 125 lb
- Power ♦ 110V, 50 to 60Hz (USA); 240V, 50Hz (Int.)
- Operating power ♦ 300 watts
- Operating environment ♦ Temperature: 15° to 30°C  
Relative humidity: 35% to 80% non-condensing
