

Over ten years.
More than ten thousand users.

When you need more from
your digital printing software.

POSTERSHOP®

- 1. Open
- 2. Preview
- 3. Size & Tile
- 4. Print

It's that easy!

PosterShop Pro

PosterShop® Pro is the centerpiece of our Windows 95 / NT product line and gives fast and powerful ripping of jobs that contain PostScript® and most bitmapped file formats.

PosterShop Pro comes with standard tools that let you perform difficult tasks easily and with consistent results from one job to the next. Interactive sizing, cropping and tiling, as well as full pan and zoom, instantly show on your display. True 32-bit multitasking means that you don't have to wait to prepare the next job while another is processing or printing. Using PosterShop WinConnect you can even print directly from within your creative application, saving precious time and further accelerating your workflow. Six dot patterns are supported along with all the most popular large format printers on the market. Onyx™ works closely with major printer manufacturers to help research and bring improved solutions to market.

"Around the world, more printing professionals rely on PosterShop and Onyx to help increase their profit and productivity."

Built-in tools

- Color correction
- Image rotation - tiling
- Mask out backgrounds
- Replace individual colors / color ranges
- Access unique printer options

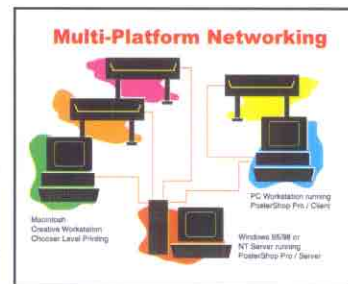

PosterShop Server

"Eliminate workflow bottlenecks with Onyx's powerful server solution."

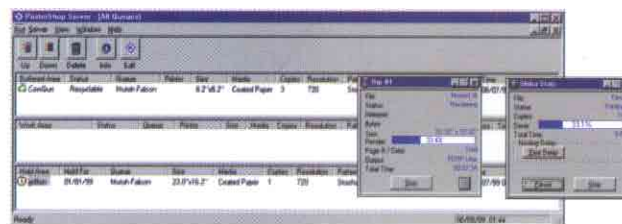

When you're ready to add more printers and more workstations, or connect to a network, PosterShop is ready too. PosterShop Server adds an intuitive print management solution to what you're already familiar with in PosterShop Pro. With optimized

multi-threaded 32-bit code, Server can quickly process and print to many different printers simultaneously. When shared on your network, Server can automatically process and print images from any computer connected to your network – PC or Macintosh™. Additional Client packages let you edit and prepare PosterShop jobs at a remote location and then send files to Server in another location, using TCP/IP, Windows, or Appletalk networking. Now you can preview, size, crop, or color correct from any number of remote workstations without tying up your server. It's just one of many ways PosterShop Server can optimize your workflow no matter which way your work flows.

At a glance

- Versatile and efficient
- Drag and drop interface
- RIP & print when you want
- Records statistics
- Buffer jobs or . . .
- Archive permanently

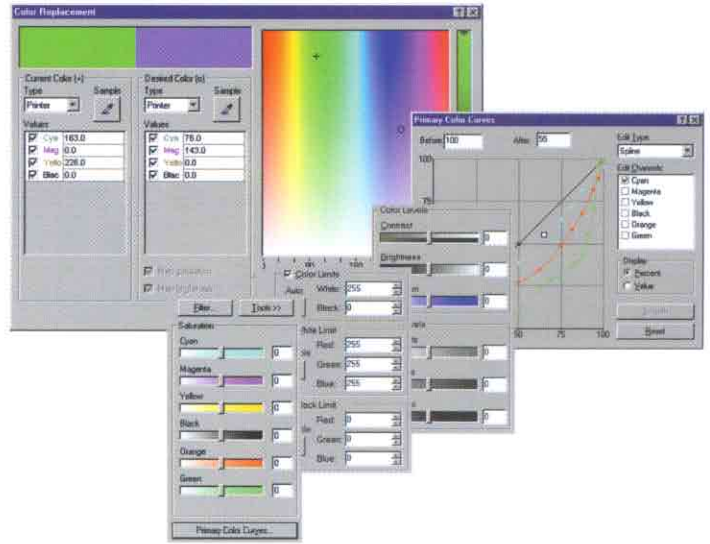

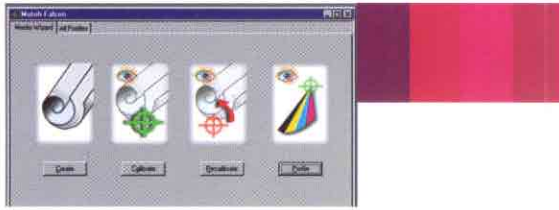

new in whats **PosterShop** 5.0

- **PostScript® 3™ compatibility**
- **New PostScript RIP**
 - Faster JAWS™ interpreter from 5D®
 - Support for PDF, PhotoShop, GIF, TIFF/IT and L*a*b* TIFF
- **Localized versions**
 - Now available in Spanish, French, German, Italian, Japanese, and Chinese
- **Improved color**
 - Logo color management system from GretagMacbeth® gives the best color in the industry
 - Choose from accurate or pleasing color models
- **Automated color profiling tools**
 - Build media models automatically
 - Easier export and import of customized profiles
 - Meaningful graphic views of color data
- **Job templates**
 - Create template libraries containing job preference settings and apply to any image you choose
 - Remembers settings from last print so you can easily and efficiently repeat similar jobs
- **Primary and spot color support**
 - Create color profiles using CMYK, RGB, OG, and any corresponding "light" ink as well as spots
- **Virtual Pixel™ printing**
 - Process quickly at lower resolutions but print at your printer's maximum resolution with minimal loss of detail
- **Simplified server installation**
- **Improved stochastic dot pattern**

Profile Generator

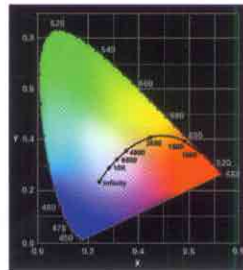

In a perfect world everyone would see color the same. In a perfect world “Magenta” would be the same magenta no matter what device it was created on, no matter what printer it was output to. Onyx was the first RIP developer for large format output on the PC to seamlessly integrate a professional ICC color profiling system within its software. The optional PosterShop Profile Generator™ gives you true colorimetric control over your printer

profiles to provide state-of-the-art color matching and proofing on any output device supported by PosterShop. We also allow you to import and modify ICC profiles from other sources, so you can use the same profile everywhere.

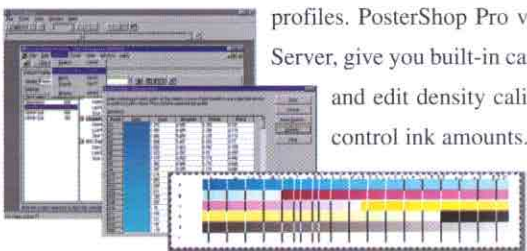

ICC Compatibility Standard

In 1993 a common set of color standards was created by the International Color Consortium. The ICC developed a standard specification known as an ICC Profile to describe a device in CIE color space. Onyx not only subscribes to this standard in all of its PosterShop software products, but is an active member of the consortium, along with its founding partners including, Adobe, Agfa, Microsoft, Apple, and other influential members.

Complete Optional Profiling System

All PosterShop packages give you the ability to import and apply ICC profiles. PosterShop Pro versions, including Server, give you built-in capabilities to create and edit density calibration tables and control ink amounts.

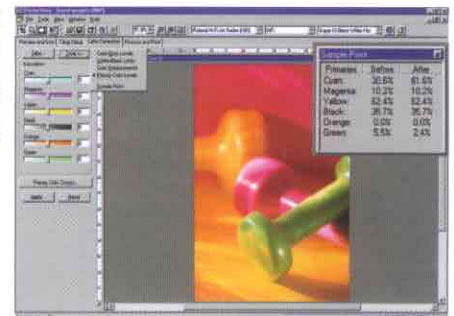

Color Tools

This is what it's all about – Color! But not all jobs are created equal. For that reason we include several levels of color correction tools that let you quickly and easily make changes without leaving PosterShop. From simple to sophisticated, users will find an intuitive toolset. Change brightness, saturation and contrast for the whole image, or individually affect highlight, midtones and shadows as easily as you would adjust the knobs on your TV set. Powerful CMYK and HSV tools allow more advanced users to fine tune images to meet the demands of the most exacting clients. You can even view up to four color filters at once to compare changes. All this and more without touching your original file. PosterShop Pro gives you the tools to select a specific color or a range of colors and replace it with another to fine tune even the most difficult prints.

“The color tools pay for themselves the first time you use them on a 100 mb plus file.”

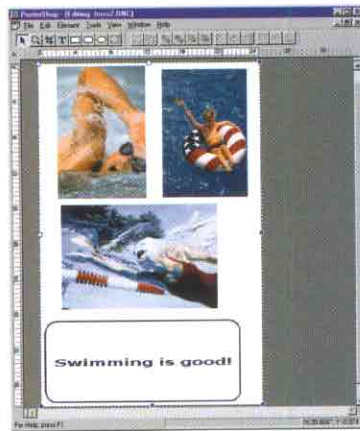

Collage Tool

Collage, a PosterShop option, gives you a way to easily combine multiple processed images into a single output file. Place any number of job files on a virtual page and print with multiple resolutions without having to re-rip each image. Collage is a great tool for placing odd shaped files to save time and materials. It can also help to place prints on the page to allow for specific finishing techniques. Images can

overlap or by using a transparency mask you can “float” a logo or other piece of art on top of an image. What a great tool to help you save media, time and effort.

- **Accurate image placement**
- **Step and repeat functionality**
- **Apply different ICC profiles and Color Correction Filters to individual clips**
- **Create and place text**
- **Create and place boxes and other geometric shapes with fill and stroke capabilities**
- **Resize the Collage page**
- **Intuitive alignment dialogue**
