

PhotoScript Configuration Utility (Windows Version)

PHOTOSCRIPT - PLUS

PhotoScript Plus™ is a more powerful version of the PhotoScript software PostScript® level 2 compatible printing solutions for non-PostScript printers. In addition to performing like a standard Mac OS® or Windows® PostScript Printer Driver PhotoScript Plus offers a range of enhanced features including PhotoScript Viewer™, a Preflight RIP to screen utility for checking PostScript jobs before they are printed and PhotoMatch™ Creator, an extension to PhotoScript that provides customised color management and screening controls.

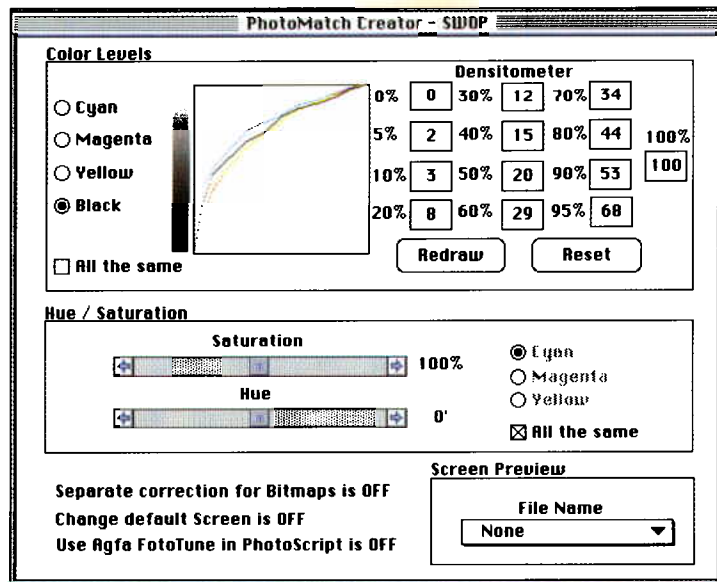

PhotoScript accelerators are available with High Speed Parallel (ECP), VPI and Color Laser Copier direct connect interface options.

PhotoScript Plus is the ideal choice for 'plug and play' PostScript color printer compatibility. It's blazing speed and easy to use custom print modes and color management features offer superior output quality, regardless of media and ink combinations, and dramatically speeds up work flow and output productivity.

“Enhanced PostScript Compatible Printing and Color Management”

PhotoScript Plus offers blistering performance. It's unique 'RIP on the fly' technology allows PhotoScript to process the PostScript job information whilst the printer is printing thereby reducing the amount of processing that is required before a printer starts to print.

PhotoScript Plus can also be used in conjunction with the PhotoScript PCI Bus I/O accelerator cards for Mac's and PC's which speed up output to many color printers and boosts productivity by allowing printing of one job whilst the next job is being processed by the PhotoScript interpreter.

PhotoMatch Color Management (Mac OS Version)

PHOTOSCRIPT - PLUS

	Macintosh	PC Compatible
Operating System:	Mac OS System 7.5.3 or later Open Transport Version 1.12 or later	Windows 95 and Windows NT Version 4 or later
Hardware Requirements:	Power Macintosh 66mhz or faster	IBM Compatible 486DX 66mhz or faster
Memory Requirements:	16mb minimum 32mb recommended	16mb minimum 32mb recommended
Storage Requirements:	At least 32mb free disc space	At least 32mb free disc space
Output Interfaces:	Ethertalk, SCSI, RS422	Parallel, Serial
Optional Interfaces:	GeoPort Serial to Parallel Adaptor PhotoScript PCI Bus I/O Accelerators	
Interpreter:	PostScript Level 2 Language Compatible with PhotoMatch Screening and Color enhancements	
Color Management:	PhotoMatch Creator
