

The Seal ProCut Elite 2 Cuts Virtually Any Mounting Board Down to Size, Quickly and Cleanly.

ProCut Elite 2

Multi-Substrate Cutting

Versatile, fast, accurate and safe. The ProCut Elite 2 offers smooth, gravity assisted cutting of foam boards, matboard, hardboard, expanded PVCs, polystyrene, acrylic and glass, all without hazardous dust or debris. There is no need for electrical power or compressed air, and the Elite 2's cutting track can accommodate materials up to 63" (1.6 m) wide, by any length.

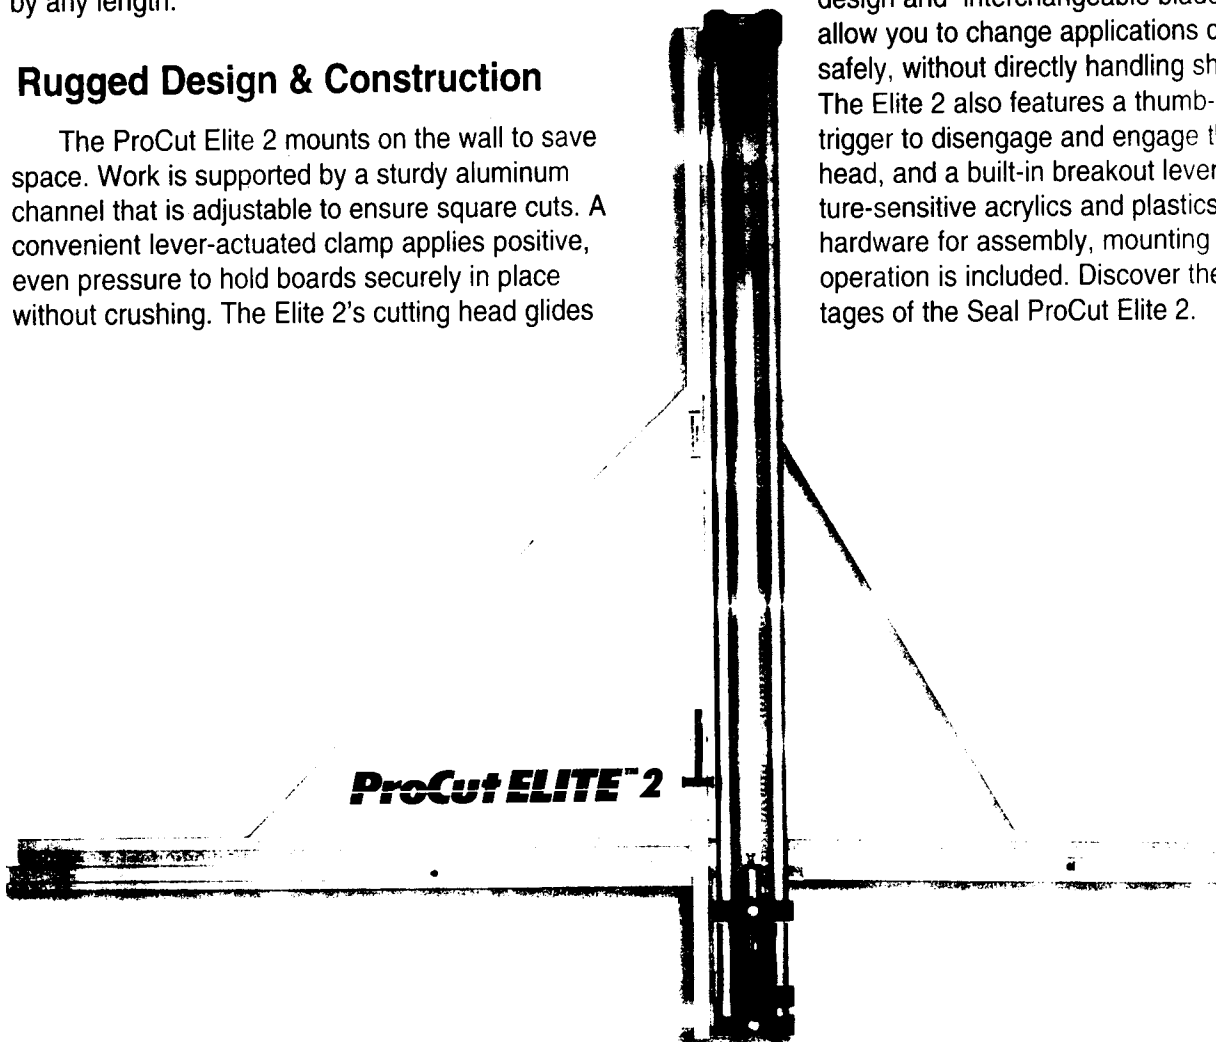

Rugged Design & Construction

The ProCut Elite 2 mounts on the wall to save space. Work is supported by a sturdy aluminum channel that is adjustable to ensure square cuts. A convenient lever-actuated clamp applies positive, even pressure to hold boards securely in place without crushing. The Elite 2's cutting head glides

smoothly on two large diameter polished steel tubes, riding on special plastic bushings that eliminate the need for lubrication. The sturdy cutting track, combined with a narrow blade channel and reinforced blade magazines, eliminates head play and blade drift for straight, accurate cuts every time.

Easy to Use

The ProCut Elite 2 is easy to use and requires minimal operator training. Built-in graduated scales and adjustable stops make measuring and mass production cutting a snap. Plus, the cutting head's pillar post design and interchangeable blade magazines allow you to change applications quickly and safely, without directly handling sharp blades. The Elite 2 also features a thumb-actuated trigger to disengage and engage the cutting head, and a built-in breakout lever for fracture-sensitive acrylics and plastics. All hardware for assembly, mounting and operation is included. Discover the advantages of the Seal ProCut Elite 2.
