

TEPS-2000

Event and Portrait Software

TEPS 2000

is the optimal software solution designed for digital event or portrait photography customers who want to use intuitive Apple computers. TriPrism engineers have created an extremely flexible application where customers can choose to use virtually any combination of digital cameras and printers in the marketplace. Furthermore, TriPrisms' vast experience in developing software solutions to satisfy the demands of the Amusement park industry has led to an outrageously easy to use and highly productive software package. The end result is a hassle free, profitable solution for photographers wanting to capitalize on the exploding growth of the digital photography industry.

TriPrism Offers 3 Versions of the TEPS-2000 in an effort to satisfy everyone's needs

The **TEPS-2000P** package will provide unlimited use of the software with no licensing fee. (\$3,995)

The **TEPS-2000E** package will enable a customer to start using exactly the same software for half of the initial cost. This ability to defer the up front cost of the software is accomplished by the use of a licensing fee that is monitored by a dongle which counts each print made. This package includes a dongle that has been programmed for 5,000 prints. When a customer gets close to using up that number of prints, they reorder a new dongle @ \$.15 per print. For example, to reorder a 10,000 count dongle, the price would be \$ 1,500. (\$1,995)

The **TEPS-2000L** package will allow the software to be used on multiple computers without paying the full price for the above versions. This version will do everything except print. You can buy two of the TEPS-2000L packages if you own either a TEPS-2000E or TEPS-2000P. (\$995)
