

X-ACTO® ST Rotary Cutters Offer Smooth, Safe, Accurate Cutting of Rollable Media From Thin Papers to Thick Laminated Images.

The X-ACTO ST40 and ST54 combine Seal's knowledge of finishing materials with Hunt's X-ACTO cutting technology to meet the rigorous media cutting requirements of today's high-volume digital printing and finishing services. They offer fast, straight, bind-free cutting of thin plotter papers and laminating films, photographic papers, plain papers, thicker laminates and sealed images up to 20 mils thick. The ST40 and ST54 feature cutting tracks of 41 and 55 inches, yet their "open-end design" allows you to cut materials of any length. X-ACTO ST cutters are designed for maximum operator safety, maximum accuracy and ease of use.

Performance Features

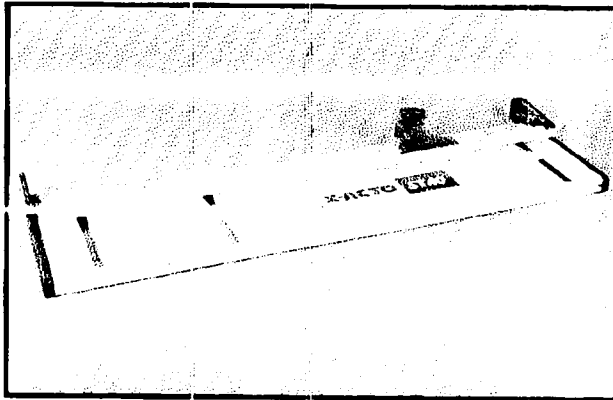

- **Extra Long Capacity.** The ST40 and ST54's 41-inch and 55-inch cutting tracks feature an open-end design that allows you to cut materials longer than the machine itself (in segments).
- **Positive, Self-Actuating Clamp.** The light downward pressure required to engage the cutting head automatically clamps your work to the cutter's table. Releasing the head allows you to feed more media for the next cut. And the clamp is designed so it won't mar your images.
- **True-Track Design.** The ST cutting assembly, track and table are engineered to prevent blade deflection or jumping so you get smooth, bind-free cuts every time; even on images laminated with 10 mil film on both sides.
- **High-Carbon Tool Steel Cutting Wheel.** This extra durable blade-wheel ensures long life, straight clean cuts and a smooth finished edge.
- **Bi-directional Cutting.** Unlike many competitive machines, the ST40 and ST54 cut in both directions. Cuts can be made with the head starting on either the right or left sides of the table to speed production. Plus, the cutting head's ergonomic, pivoting handle design permits left or right hand operation with maximum comfort.
- **Maintenance-free Teflon Coated Track and Nylon Head Bushings.** These features result in smooth, fast cuts and maximum durability without the need for lubrication.
- **Disassembles Without Tools.** This makes cleaning or changing blades fast and easy.
- **Rigid, Durable Aluminum and Steel Construction.** This means no flexing for straight accurate cuts, and years of reliable service.
- **Floorstand, Removable Catch Bin and Roll Holder** standard on ST54 models.

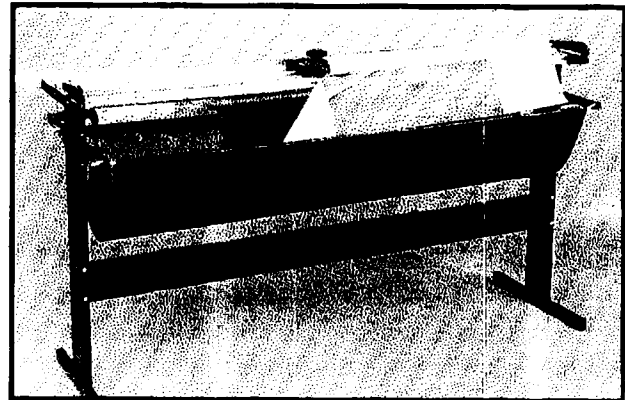

The ST54 features a floorstand, catch-basin, and roll feed.

Technical Specifications		
	ST40	ST54
Cat No.	2415	2425
Design	Tabletop	Floorstanding
Cutting Track Length	41" (104 cm)	55" (140 cm)

Specifications subject to change without notice.

The ST40 is a tabletop model with an open-ended, 41" cutting track.

Both the ST 54 and ST40 can cut rollable materials from thin papers to laminates up to 20 mils thick.
